# 1. System Overview

Srota RMS is a cloud-based Restaurant Management System designed for hotels, restaurants, and food service businesses operating in Nepal. It enables:

- Digital order management and billing
- IRD-compliant electronic invoice generation (Full Tax Invoice, Abbreviated Tax Invoice, and PAN-only bills)
- Real-time synchronization of billing data with IRD's Central Billing Monitoring System (CBMS)
- Standard View and register-based reports as required under the Electronic Billing Procedure 2082

The software complies with **विद्युतीय बीजक सम्बन्धी कार्यविधि, २०८२** (Electronic Billing Procedure 2082).

## 1.1 Architecture Overview

Srota RMS operates as a web application:

- **Frontend:** Browser-based POS interface accessible from any device
- **Backend:** Centralized FASTAPI server hosted on Nepal-based infrastructure
- **Database:** PostgreSQL with enforced immutability on issued invoices
- **CBMS:** Automatic bill synchronization to IRD's CBMS API (<https://cbapi.ird.gov.np/api/bill>)

Figure 1: High-level system architecture diagram - browser to API server to database and CBMS

## 2. System Requirements

| Requirement       | Specification                                                 |
|-------------------|---------------------------------------------------------------|
| Device            | PC, laptop, tablet, or smartphone                             |
| Browser           | Google Chrome 110+, Mozilla Firefox 110+, Microsoft Edge 110+ |
| Internet          | Minimum 2 Mbps broadband connection                           |
| Printer           | Any network or USB receipt/A4 printer                         |
| Screen resolution | Minimum 1280 x 720                                            |

No local software installation is required. The system is fully web-based.

## 3. Accessing the Software

### 3.1 Login

Navigate to the Srota RMS URL provided by your system administrator.

Figure 2: Login page - showing username and password fields, Login button

Enter your assigned **Username** and **Password**, then click **Login**.

Figure 3: Successful login - RMS dashboard/home screen

## 4. User Roles and Access Control

Srota RMS implements role-based access control. Each user is assigned one of the following roles:

| Role    | Description                       | Key Permissions                                             |
|---------|-----------------------------------|-------------------------------------------------------------|
| Owner   | Business owner or top-level admin | Full access to all branches, reports, settings, credentials |
| Manager | Branch manager                    | Order management, billing, reports for assigned branch      |
| Waiter  | Service staff                     | Create and send orders to kitchen; cannot bill              |
| Chef    | Kitchen display                   | View and update order status only                           |

### 4.1 Managing Users

Only Owner and Manager roles can create or modify user accounts.

Figure 4: Settings > Users list - showing list of users with their roles and branch assignments

The screenshot displays the Srota RMS web application interface. The top navigation bar includes a 'Settings' tab and a list of modules: Dashboard, Orders, Menu, Delivery, Kitchen, Inventory, Expenses, Customers, Khata, Employees, Reports, and Settings. The 'Users' module is selected, showing a list of user roles: Manager, Waiter, and Chef. Each role has a description and a '+ Add' button. A modal form titled 'Add Waiter' is open, containing the following fields:

- Branch:** A dropdown menu with 'Demo Business Pvt. Ltd.' selected.
- Full name:** A text input field containing 'Demo Waiter'.
- Phone:** A text input field containing '9876122224'.
- Email:** A text input field containing 'demo@gmail.com'.
- Username:** A text input field containing 'demo-waiter-1'.
- Password:** A password input field with masked characters '.....'.

At the bottom of the modal, there are 'Cancel' and 'Create account' buttons. The background shows the 'Users' management page with a table of users and a '+ Add User' button.

Figure 5: Add User form - name, email, phone, role, branch fields

Each credential stores the user's **full name**, **email**, and **phone number**. The name is snapshotted onto every bill they issue as the issuer name.

## 5. Branch and Business Setup

### 5.1 Business (Tenant) Settings

**SROTA**  
SOURCE OF SOLUTIONS

- Dashboard
- Apps
- Branches
- Team Members
- Settings**

## Settings

Business details shared across every app you run.

**BUSINESS LOGO**

 **Upload image**

PNG, JPG, WEBP or SVG, up to 5MB. Shown on invoices and receipts across every app.

 Preview only for now — saving isn't wired up yet.

**TAX REGISTRATION**

**PAN number**

 123456789

**PAN only**  
No VAT on invoices

**VAT registered**  
13% VAT on invoices

 VAT-registered — invoices will show 13% VAT.

**Save changes**

Figure 6: Admin settings - Business Details screen showing PAN, VAT number, business name, address

Key fields required for IRD compliance:

| Field            | Purpose                                                                   |
|------------------|---------------------------------------------------------------------------|
| Business Name    | Printed on every bill header                                              |
| PAN / VAT Number | Printed on every bill; used in CBMS submission as <code>seller_pan</code> |
| Address          | Printed on every bill                                                     |
| Phone            | Printed on every bill                                                     |

## 5.2 Branch Settings

Each physical location operates as a separate branch. Bills are numbered independently per branch.

The screenshot shows the 'Branch settings' page in the Srota RMS application. The page title is 'Restaurant & branch' and it indicates 'Viewing settings for Demo Business Pvt. Ltd.'. The settings are organized into sections: 'Restaurant name' (Demo Business Pvt. Ltd.), 'Branch address' (Demo Address), 'Branch phone' (9761234566), and 'Business PAN' (PAN 123456789). Each field has a 'From business' or 'From branch' label indicating its source. The page also includes a navigation bar with various modules like Dashboard, Orders, Menu, Delivery, Kitchen, Inventory, Expenses, Customers, Khata, Employees, Reports, and Settings.

Figure 7: Branch settings - showing branch name, address, bill series prefix

| Field              | Purpose                                                   |
|--------------------|-----------------------------------------------------------|
| Branch Name        | Included in bill header                                   |
| Bill Series Prefix | Used in bill number format (SERIES-BRANCH-FY-NNNNN)       |
| Default HS Code    | Applied to all menu items unless overridden at item level |

## 5.3 Tax Settings

The screenshot shows the 'Tax' settings page in the Srota RMS application. The page title is 'Tax' and it indicates 'Viewing settings for Demo Business Pvt. Ltd.'. The settings include 'Business tax status' (VAT-registered), 'Apply VAT on bills' (toggled on), 'VAT rate (%)' (13), and 'Default HS Code' (2185.98). The page also includes a navigation bar with various modules like Dashboard, Orders, Menu, Delivery, Kitchen, Inventory, Expenses, Customers, Khata, Employees, Reports, and Settings.

Figure 8: Tax Settings screen - showing VAT registration toggle, PAN/VAT fields

## 6. Menu Management

Menu items are organized into categories for display in the POS interface. Each menu item carries an **HS Code** (हार्मोनाइज्ड सिस्टम कोड), printed on every bill line as required under Annexure 6 of the Electronic Billing Procedure 2082.

Figure 9: Menu > Items list - showing item name, price, category

Figure 10: Add/Edit Item form - highlighting the HS Code field

If a branch-level default HS code is set in Branch Settings, items without an explicit HS code inherit it.

## 7. Table Management

Each table shows real-time status in the POS interface.

Figure 11: POS home - table grid showing Available (green), Occupied (orange), Reserved states

## 8. Creating an Order

### 8.1 Starting a New Order

From the POS home screen, tap an available table.

Figure 12: Table selection - tapping T1 table opens the order view

Figure 13: Order view - left panel shows menu categories and items; right panel shows current order

## 8.2 Adding Items

Tap a menu item to add it to the order. Adjust quantity using the + / - controls.

Figure 14: Order view - items added to the right panel with quantities and line totals

## 8.3 Applying a Discount

Figure 15: Discount field on the order view - entering a flat or percentage discount

## 8.4 Sending to Kitchen

Tap **Send to Kitchen** to transmit the order to the kitchen display. A kitchen order slip is printed with a sequential slip number.

Figure 16: Kitchen order slip - showing slip number, table, items, timestamp

The slip number appears on the final bill as required under दफा ६.२घ.

## 9. Billing and Payment

### 9.1 Checkout

When the guest is ready to pay, tap **Mark as Paid** on the order.

Figure 17: Checkout screen - showing order summary, buyer PAN field, payment method selector (Cash / QR / Credit)

**Buyer PAN** (optional): Enter the buyer's PAN if they request a tax invoice with their PAN recorded. Leave blank for walk-in guests.

**Payment Method:** Select Cash, QR (digital payment), or Credit.

### 9.2 Processing Payment

Figure 18: Payment confirmation screen - showing total, VAT breakdown, amount tendered, change

Tap **Confirm Payment** to finalize the bill.

### 9.3 Printing the Bill

Figure 19: Bill print preview - showing full bill layout before printing

Tap **Print** to send the bill to the connected printer. The system records:

- Is\_Bill\_Printed = Yes
- Printed\_Time = timestamp of first print
- Entered\_By = logged-in cashier's name
- Printed\_By = name of user who triggered the print

Reprinted bills display a “**Copy of Original**” watermark as required under दफा ६.२च.

## 10. Bill

### Mandatory fields on this template:

| Field                | Requirement                                |
|----------------------|--------------------------------------------|
| Seller PAN / VAT No. | Printed in header                          |
| Bill Number          | Sequential, format SERIES-BRANCH-FY-NNNNN  |
| Bill Date (BS)       | Bikram Sambat date                         |
| Buyer Name / PAN     | Captured at checkout; blank for walk-in    |
| HS Code per line     | Printed in item table                      |
| Taxable Amount       | Shown before VAT                           |
| VAT (13%)            | Shown separately                           |
| Grand Total          |                                            |
| VAT Refund Amount    | Shown for QR/digital payments              |
| QR Code              | Encodes bill data for offline verification |
| Issuer Name          | Staff name snapshotted at billing time     |

## 11. Credit Notes

A credit note is issued to reverse a paid bill (full or partial return).

### 11.1 Issuing a Credit Note

Navigate to **Bills** tab. Locate the paid bill. Click **Credit Note**.

Figure 20: Bills tab - showing a paid bill with the Credit Note button visible

Figure 21: Credit Note form - showing original bill reference, return amount, reason field

Enter the **reason for return** and the amount. Confirm to issue.

**Issue credit note** ×

Reverses RMS-DBP-83/84-00006 — this creates a new, separately numbered credit note linked to the original bill. The original bill itself is never edited or deleted.

REASON

Customer wanted refund after food did not taste proper.

Cancel Issue credit note

Figure 22: Credit note printout - showing “Credit Note” header, original bill number, return amounts, reason

The credit note is:

- Assigned its own sequential bill number
- Automatically submitted to CBMS via `/api/billreturn`
- Listed separately in the Credit Notes register (never in the Sales Register)

## 12. Void (Draft) Bills

A **void** cancels a bill that was printed but not yet paid (draft state).

### 12.1 Voiding a Draft Bill

Navigate to **Bills** tab. Locate the draft bill. Click **Void**.

Figure 20: Bills tab - showing a draft bill with the Void button visible

Figure 23: Void confirmation dialog - “Are you sure you want to void this bill?”

A voided bill is permanently cancelled. It is not submitted to CBMS. It remains visible in the system for audit purposes with status `void`.

**Note:** Only draft/unpaid bills can be voided. A paid bill cannot be voided - a credit note must be issued instead.

## 13. Reports

All reports are accessed from **Reports** → **IRD Reports**.

Figure 24: Reports section - showing available report cards: Standard View, Sales Register, Credit Notes, Annexure 13, VAT Summary, TDS

### 13.1 Standard View (Annexure 5)

The Standard View lists all issued bills with the 20 fields mandated by Annexure 5 of the Electronic Billing Procedure 2082.

| Demo Business Pvt. ## 14. CBMS Integration

### 14.1 Enabling CBMS

CBMS is available only for VAT-registered tenants. Navigate to **Settings** → **IRD / CBMS**.

The screenshot shows the Srota Admin interface with the 'Settings' menu selected. The 'IRD CBMS INTEGRATION' card is displayed, containing the following elements:

- IRD CBMS INTEGRATION** header.
- Text: "Shared by every app you run — Inventory (IMS) and Restaurant POS (RMS) both submit bills through this one login, entered here once."
- Status: "Not configured yet" (with an info icon).
- IRD username** section with a text input field labeled "IRD Taxpayer Portal username".
- IRD password** section with a text input field labeled "IRD Taxpayer Portal password".
- A checkbox with the text: "I understand this is our business's live IRD Taxpayer Portal login, not a scoped API key — it will be used to submit real bills to CBMS on our behalf once auto-sync is enabled below."
- A dark blue **Save credentials** button.
- An info icon with text: "This is voluntary. IRD hasn't published fixed revenue or transaction thresholds in this procedure — only that some taxpayers are individually designated for mandatory real-time submission. Turn this on if IRD has notified you it's required for your business, or if you want to comply early; otherwise your bills stay fully compliant without it."
- Enable CBMS auto-sync** toggle switch (currently off), with the text "Save credentials above first." below it.
- Sync status summary:
 

| LAST SYNCED | PENDING | FAILED |
|-------------|---------|--------|
| —           | 0       | 0      |
- Footnote: "Detailed per-bill sync status and resync actions are available from each app's own Settings page."

Figure 31: CBMS settings card - showing username, password fields, enable toggle, "Save" button

Enter the business's **IRD Taxpayer Portal username and password**. These credentials are encrypted at rest and never stored or logged in plaintext.

## 14.2 How Synchronization Works

Every time a bill is paid or a credit note is issued:

1. The system queues a CBMS submission job
2. The job sends the bill payload to `https://cbapi.ird.gov.np/api/bill` (or `/api/billreturn` for credit notes)
3. IRD's response code is recorded in the sync log

The CBMS sync is a **separate process** from billing - a failed sync does not affect the bill itself or the customer's transaction.

## 14.3 CBMS Sync Log

Figure 32: Settings > CBMS Sync Log - showing table with columns: Bill No., Date, Status (synced/failed/pending), IRD Response Code, Last Attempted

| IRD Response Code | Meaning                  | System Action                       |
|-------------------|--------------------------|-------------------------------------|
| 200               | Success                  | Marked synced                       |
| 100               | Auth mismatch            | Flagged - credentials need updating |
| 101               | Already submitted        | Treated as synced                   |
| 102 / 103         | Transient error          | Auto-retried with backoff           |
| 104               | Invalid payload          | Flagged for investigation           |
| 105               | Bill not found (returns) | Flagged for investigation           |

## 15. Data Integrity and Security

### 15.1 Immutability of Issued Invoices

Once a bill is marked as **paid**, its financial data (amounts, items, tax values, bill number) **cannot be modified**. The system enforces this at the database level - no application-layer or direct database update can alter a paid bill's core fields.

Only the following post-issue actions are permitted, as required by IRD:

- **Reprint** (creates a “Copy of Original” watermark copy - original record unchanged)
- **Credit Note** (creates a new reversing document - original record unchanged)

### 15.2 Audit Log

Every action performed in the system is logged with:

- User identity (name + role)
- Timestamp
- Action type
- Before and after state (for any change)

This log is a complete, tamper-evident record that cannot be deleted or modified by any user, including administrators. It can be filtered by date range, entity type, and user, and exported to XLSX for audit submission.

| When                 | Action             | Document / Entity      | Reason | IP          |
|----------------------|--------------------|------------------------|--------|-------------|
| 9/7/2026, 2:48:43 PM | Order cancelled    | RMS-DBP-83/84-00004    | —      | 27.34.67.21 |
| 9/7/2026, 2:47:49 PM | Credit note issued | RMS-CN-DBP-83/84-00007 | —      | 27.34.67.21 |

### 15.3 Access Control

User passwords are stored as cryptographic hashes (bcrypt). IRD CBMS credentials are stored encrypted (AES-256). Plaintext credentials are never stored or logged anywhere in the system.
